PROFESSIONAL SUMMARY

Software Engineer with **6+ years** building **high-throughput payment systems and cloud-native backend infrastructure**. Consistent track record of reducing risk, cutting costs, and scaling systems reliably under pressure, with a growing focus on **AI-driven approaches** to detection and automation.

EXPERIENCE

JP Morgan Chase
Bengaluru, India

Software Engineer III — *Dec 2024 – Present*

- Prevented **~$120K in annual fraud losses** by engineering mule score enrichment into the detection engine, improving accuracy across high-value payment channels.
- Expanded real-time fraud signal coverage by integrating payment borrow systems into enterprise detection workflows, reducing false negatives on previously under-monitored transaction types.
- Played a key role in expanding the **Chase banking platform from the UK into Germany**, collaborating across teams to scale core banking infrastructure for a new European market.
- Slashed **CockroachDB storage from 40TB to 15GB** via TTL-based data lifecycle jobs and systematic table-pruning, cutting infrastructure cost significantly.

GoDaddy
Remote

Software Engineer II → III — *Jul 2021 – Nov 2024*

- Drove **$60K/month reduction in fraud losses** by building velocity-based detection APIs and analyst tooling that enabled faster intervention across payment channels.
- Eliminated **$10K/day in IRSF losses** by partnering with external fraud vendors to implement real-time signal enrichment and automated call blocking.
- Architected rule-based risk evaluation systems processing **millions of daily transactions** for payment fraud and account takeover, with high precision and low false-positive rates.
- Reduced sign-in fraud evaluation latency from **350ms to 60ms (83% faster)** by re-engineering login event ingestion pipelines.
- Built monitoring dashboards using **Prometheus, Elasticsearch, and Kibana**; owned on-call for fraud services, reducing MTTD on critical incidents.
- Led Kubernetes EKS upgrades from v1.25 to v1.29 across production, improving security posture and maintainability.

Practo
Bengaluru, India

Software Engineer Intern → Engineer → Engineer II — *May 2019 – Apr 2021*

- Increased marketplace **CTR by 16%** by leading a full redesign of the mobile web experience.
- Boosted SEO rankings by implementing dynamic server-side metadata generation across thousands of marketplace pages.
- Cut TTFB by 10% migrating high-traffic REST APIs to GraphQL with zero downtime.
- Scaled automated test coverage from **5% to 80%**, cutting regression risk and accelerating release cadence.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript

Cloud & Infra: AWS (EKS, SQS, Kinesis, RDS, DynamoDB), Kubernetes, Docker, Terraform

Databases & Messaging: CockroachDB, DynamoDB, PostgreSQL, Redis, Kafka, SQS

Practices: Fraud Detection, Distributed Systems, Event-Driven Architecture, CI/CD, System Design

Backend: Spring Boot, Node.js, REST APIs, GraphQL, Microservices

AI & ML: LLM Integration, Prompt Engineering, ML-Based Risk Scoring

Observability: Prometheus, Elasticsearch, Kibana, Grafana, ELK Stack

EDUCATION

Guru Gobind Singh Indraprastha University
Delhi, India

B.Tech in Computer Science — *Aug 2015 – Jun 2019*

ACHIEVEMENTS & CERTIFICATIONS

- **AWS Certified Solutions Architect – Associate** (2023) | **6th & 14th place**, ACM-ICPC 2018 India Regionals.
- **Innovation Award**, Smart India Hackathon — IoT device for real-time hazardous gas detection.
